PROFILE

Robotics and mechatronics engineering graduate with experience in ABB robot programming, calibration and industrial automation commissioning. Certified SOLIDWORKS Associate with project experience in mechanical design, 3D printing, PLC sequencing and hardware integration.

PROFESSIONAL EXPERIENCE

Junior Robotics Engineer
Simpliforge Creations | Hyderabad, India | Dec 2025 – May 2026

- Programmed, simulated and deployed ABB six-axis robots using RAPID and RobotStudio for concrete 3D printing.
- Set up and calibrated workobjects, tool data and end-effectors before robot-program execution.
- Monitored live robotic printing, PLC signals and process parameters; diagnosed robot-motion and program-execution issues.
- Maintained project reports and supported safe operation of robotic printing systems.

Design & Application Engineer (Intern)
Automation Systems and Services | Kuala Lumpur, Malaysia | Nov 2023 – Feb 2024

- Created electrical schematics in AutoCAD and wired control panels for industrial automation systems.
- Developed WinCC SCADA warehouse layouts and supported sensor installation and PLC signal verification.
- Assisted commissioning and system validation through electrical-connection checks and technical documentation.

TECHNICAL SKILLS

CAD and fabrication: SOLIDWORKS, AutoCAD schematics, 3D modelling, mechanical assembly, 3D printing

Robotics and controls: ABB robots, RAPID, RobotStudio, WinCC SCADA, PLC ladder logic, I/O validation

Programming and hardware: Python, C (Arduino), Raspberry Pi, sensor calibration, hardware integration

SELECTED ENGINEERING PROJECTS

Pick and Place Robot
Academic project | Mechanical design lead | Aug 2024 – Nov 2024

- Designed a 2-DOF arm and gripper in SOLIDWORKS for a robot tasked with arranging coloured pucks into geometric patterns.
- Managed 3D printing of mechanical components, assembled the mechanism and validated object handling.

IoT Solar Monitoring System
Industry-guided final-year project | Aug 2024 – Jun 2025

- Integrated Arduino hardware and Blynk software to monitor solar-system voltage, current, power and temperature.
- Assembled and validated the prototype through rooftop deployment under guidance from Aiszzy Electronics.

Automated Resistor Segregator
Academic project | Team coordinator | Aug 2022 – Oct 2022

- Developed PLC ladder logic for sensor-based sorting; performed I/O validation, sensor calibration and functional testing.

EDUCATION AND CERTIFICATION

Bachelor of Engineering (Honours) — Robotics and Mechatronics Engineering
Monash University | Graduated July 2025

Certified SOLIDWORKS Associate (CSWA) — Dassault Systèmes | 2021
